

The anatomy of a student learning experience

Meredith Davis, Director of Graduate Programs

College of Design / NC State University

AIGA Pivot / Phoenix, Arizona / October 14, 2011

Forces shaping contemporary design practice:

- Increasing complexity in the scale of contemporary problems
- Escalating demand for interdisciplinary teamwork
- Accelerating pace of technological evolution
- Growing participation by users in the development of content and form
- Expanding accountability for anticipating the outcomes of design action

The design of learning experiences:

- open-endedness
- situatedness
- responsiveness
- position
- integration
- assessment

open-endedness

exercises

Render a mechanical object, using only black and white, to illustrate the Gestalt principle of closure.

open-endedness

exercises

Design a poster on a typeface and its designer, including a full alphabet, examples from history that use the typeface, and the designer's biography.

open-endedness

exercises

puzzles

Package a raw egg, using only toothpicks and glue, so that it survives a drop of 10 feet. The student who uses the least number of toothpicks wins!

open-endedness

exercises

Design a system for helping people who live in urban

puzzles

“food deserts” to eat a healthy diet and to develop good nutritional habits in their children.

problems

open-endedness

exercises

puzzles

problems

speculations

How might a reader's interaction with magazines read on the iPad be different from the same content in print?.

open-endedness

excerises

puzzles

problems

HIV prevention information for 15-17 year-old girls

HIV prevention information for 15-17 year-old girls who have
dropped out of school

HIV prevention information for 15-17 year-old girls who have
dropped out of school and live on the streets

the home washing machine revealed

"A person articulates herself as a female in part through the material objects and images that frame her daily activities."

the communal mower

1 lawn mower : 1 lawn

SOLO USE

One lawn is in need of occasional cutting maybe three times a month for about an hour or two. If you are not hiring a lawn service, you most likely own your own gas powered, rotary lawn mower.

That is one lawnmower too many in a neighborhood of 30 lawnmowers.

Spend less on a mower - SHARE.

Quick Facts:

1 MOWER emits 87 lbs of carbon dioxide per year

1 MOWER = 5% of nations total air pollutant

1 MOWER in 1 hour is the equivalent to the pollution of 34 cars

1 lawn mower : 3 lawns

SETTINGS

Unique to a neighborhood
(+) Community Supportive
Student oriented// Shared living spaces
Establish WHO?
Proximity
Self direction, Do It Yourself

INTERPRETATION

Interventions and Expectations
Personal Talents to Trade - trade your own talents in order to get something from your neighbor. "You mow, I will cook you dinner."
Social
Physical Properties and Maintenance- Understood Rules

ACTIONS

Very Open
Understood

The "Rules" of Play

1. Establish a "base home"
2. Create system of checking out, informing the "base owner"
3. Always fill up with gas after use, leave the way you found it.
4. Log all history of use, damage, repair
5. If you break it, you fix it
6. Must be in proximity, and must be eligible to operate
7. Fail to do so, and lose privilege of use

1 lawn mower : 1 neighborhood

OFF THE GRID

Not your normal grass cutting routine, who has the talent?

COMMUNAL

Positive Experience
Social Options
-dinner party
-block party
-customize with talents
-no strangers
Comradery
Shared Ownership
Understood Respect

INCENTIVE

Proactivity
Time Tables
Trading
Bartering

ECONOMICAL

Not an everyday item, good for environment
Split costs
Chore Swap
"Back Scratching"
Less gas
Less oil
Fewer machines,
Fewer emissions

Scalability

Does anyone have a power drill?

Don't forget that there are many other household tools that can be shared throughout the neighborhood, it is a social way to use and share expensive and rarely used household tools. It is also a very good way to share space.

Pruning Shears. Hedge Cutters. Leaf Blowers. even a Food Processor!

Sustainability

Meet your neighbors.

More lawnmowers = more waste
more pollution

REDUCE: Waste reduction and minimizing by using one source is useful. The fewer materials used for the same output means the less amount of waste produced.

REUSE: In a neighborhood why not reuse, reuse, and reuse. This helps save the planet from harmful carbon dioxide emissions as well as save your wallet.

RECYCLE: This means making used items into new raw materials which in turn uses less energy, or repairing your existing items reducing the amount of waste. Using less energy means less emissions. Instead of buying a new mower of your own, borrow and just repair!

amount of use per owner

3 times vs. 6 times vs. 12 times a month

assessment

Grant Wiggins and
Jay McTighe

assessment

what should
students know
and be able to do?

Things to have seen,
heard, read, or otherwise
encountered

Skills, theories, and
concepts

Enduring understanding:

- Self-awareness
- Empathy
- Holding a perspective
- Applying
- Interpreting
- Explaining

assessment

	qualities of performance	levels of achievement
self-awareness	reflective, self-adjusting	refines over time, debates options, resolves conflict
empathy	perceptive, open	inclusive, sensitive
holding a perspective	credible, revealing	critical, aware of other points of view
applying	effective, efficient, fluent	no need for coaching, innovative
interpreting	meaningful, insightful, illustrative	significant, clear, responsive to context
explaining	accurate, coherent, justified	complete, shows depth

conclusion...

learning experiences are **designed!**
